3/17/2026

State Water Project Contractors:

The Department of Water Resources has completed the annual review and redetermination of all water supply and financial aspects of the State Water Project (SWP) as required by the Water Supply Contracts. This report presents the data and computations used by the State of California in determining the SWP contractors' Statements of Charges to be paid in the calendar year 2026.

The information contained herein is published in compliance with Article 22(f) and Article 29(e) of the Water Supply Contracts.

The report, Bulletin 132-25, Appendix B, will also be published as part of the Department of Water Resources' Bulletin 132-25.

Sincerely,

Dave Paulson

Dave Paulson
State Water Project Analysis Office Manager

State Water Project Water Contractors

The State Water Project water contractors are listed below, followed by shortened forms of their names that are used in Bulletin 132.

Full Name	Abbreviation
Alameda County Flood Control and Water Conservation District, Zone 7	Alameda-Zone 7
Alameda County Water District	Alameda County
Antelope Valley-East Kern Water Agency	AVEK
City of Yuba City	Yuba City
Coachella Valley Water District	Coachella
County of Butte	Butte
County of Kings	Kings
Crestline-Lake Arrowhead Water Agency	Crestline
Desert Water Agency	Desert
Dudley Ridge Water District	Dudley Ridge
Empire West Side Irrigation District	Empire
Kern County Water Agency	Kern
Littlerock Creek Irrigation District	Littlerock
The Metropolitan Water District of Southern California	Metropolitan
Mojave Water Agency	Mojave
Napa County Flood Control and Water Conservation District	Napa
Oak Flat Water District	Oak Flat
Palmdale Water District	Palmdale
Plumas County Flood Control and Water Conservation District	Plumas
San Bernardino Valley Municipal Water District	San Bernardino
San Gabriel Valley Municipal Water District	San Gabriel
San Gorgonio Pass Water Agency	San Gorgonio
San Luis Obispo County Flood Control and Water Conservation District	San Luis Obispo
Santa Barbara County Flood Control and Water Conservation District	Santa Barbara
Santa Clara Valley Water District	Santa Clara
Santa Clarita Valley Water Agency	Santa Clarita
Solano County Water Agency	Solano
Tulare Lake Basin Water Storage District	Tulare
Ventura County Watershed Protection District	Ventura

Appendix B
Data and Computations
Used to Determine 2026 Water Charges

The State of California, acting by and through the Department of Water Resources (DWR), annually furnishes Statements of Charges to the 29 State Water Project (SWP or Project) water contractors. Article 29(e) of the *Standard Provisions for Water Supply Contract*, approved August 3, 1962, describes those statements:

> "All such statements shall be accompanied by the latest revised copies of the document amendatory to Article 22 and of Tables B, C, D, E, F, and G of this contract, together with such other data and computations used by the State in determining the amounts of the above charges as the State deems appropriate."

To comply with Article 29(e), DWR performs an annual comprehensive review and redetermination of all water supply and financial aspects of the SWP for the entire project repayment period. This annual redetermination is performed in accordance with Article 22(f) and Article 28 of the water supply contracts, which concern the Delta Water Rate and annual Transportation Charges, respectively.

In 2023, DWR and 27 State Water Project Contractors executed contract extension amendments to extend the repayment period to calendar year 2085. The amendment includes changes to cost recovery methodologies including a Billing Transition Date (January 1, 2024), removal of the project interest rate, and extension of repayment terms. Beginning with calendar year 2024, reimbursable costs will be recovered under Pay-As-You-Go (PayGo or PG) methodologies described under Articles 22(b), 23(b), 24(b), and 28(b) of the water supply contract extension amendment.

Appendix B includes data used to document the redetermination of water charges to be paid by SWP water contractors during calendar year 2026. The information is based on established data about the SWP, both known and projected, as of June 2025 however, small volumes of water may be reclassified over time pursuant to water supply contract provisions. Where applicable, the projected data values shown in this appendix are shaded and the bill year data are in **bold** type.

The computational procedures and interrelationships between tabulations in this appendix are outlined on *Figures B-1* and *B-2*. All tables referenced on *Figures B-1* and *B-2* follow this text.

Types of Water Charges

Charges to SWP water contractors include the costs of facilities for the conservation and development of a water supply and the conveyance of such supply to SWP service areas. These facilities are classified as "Project Conservation Facilities" and "Project Transportation Facilities" in the *Standard Provisions for Water Supply Contract*. Names of the main facilities in each classification follow.

Project Conservation Facilities

- Frenchman Dam and Lake
- Grizzly Valley Dam and Lake Davis

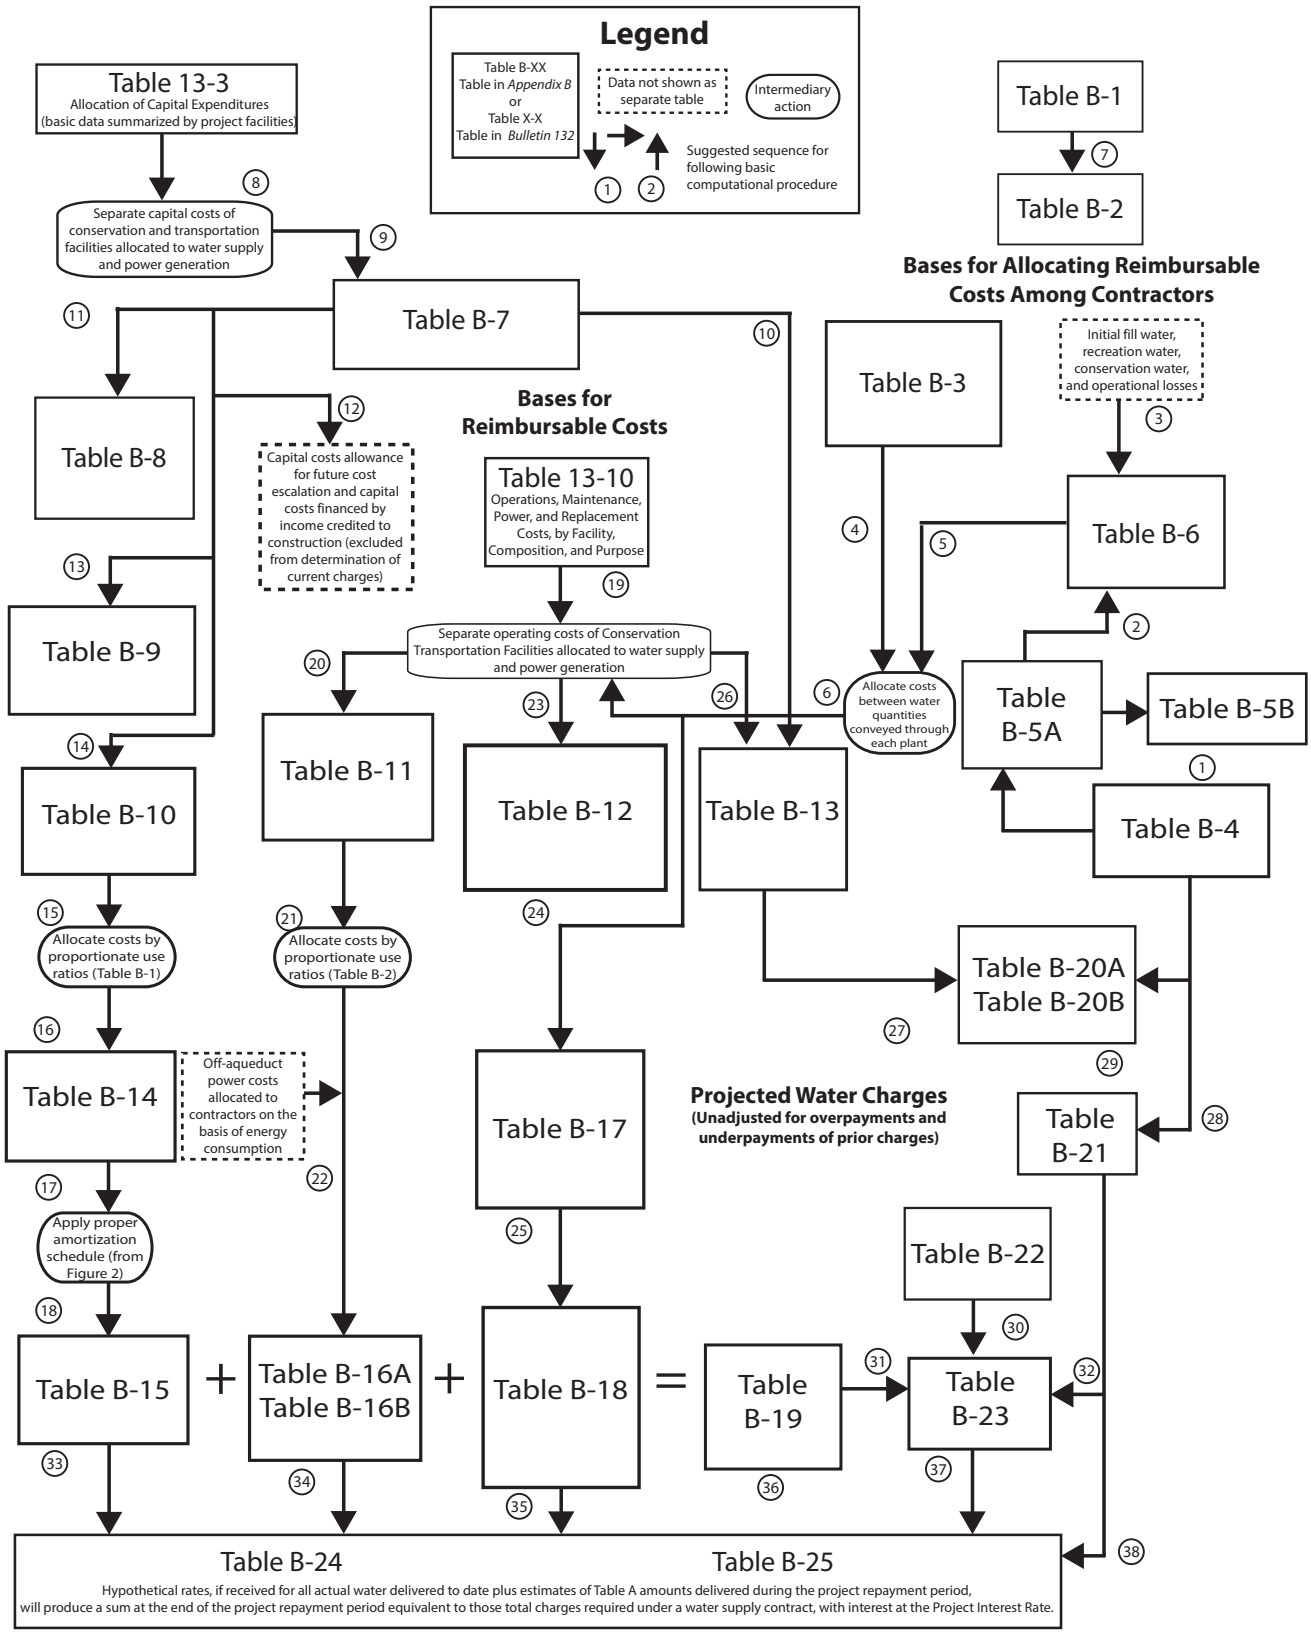

Figure B-1 Relationships of Data Used to Substantiate Statements of Charges

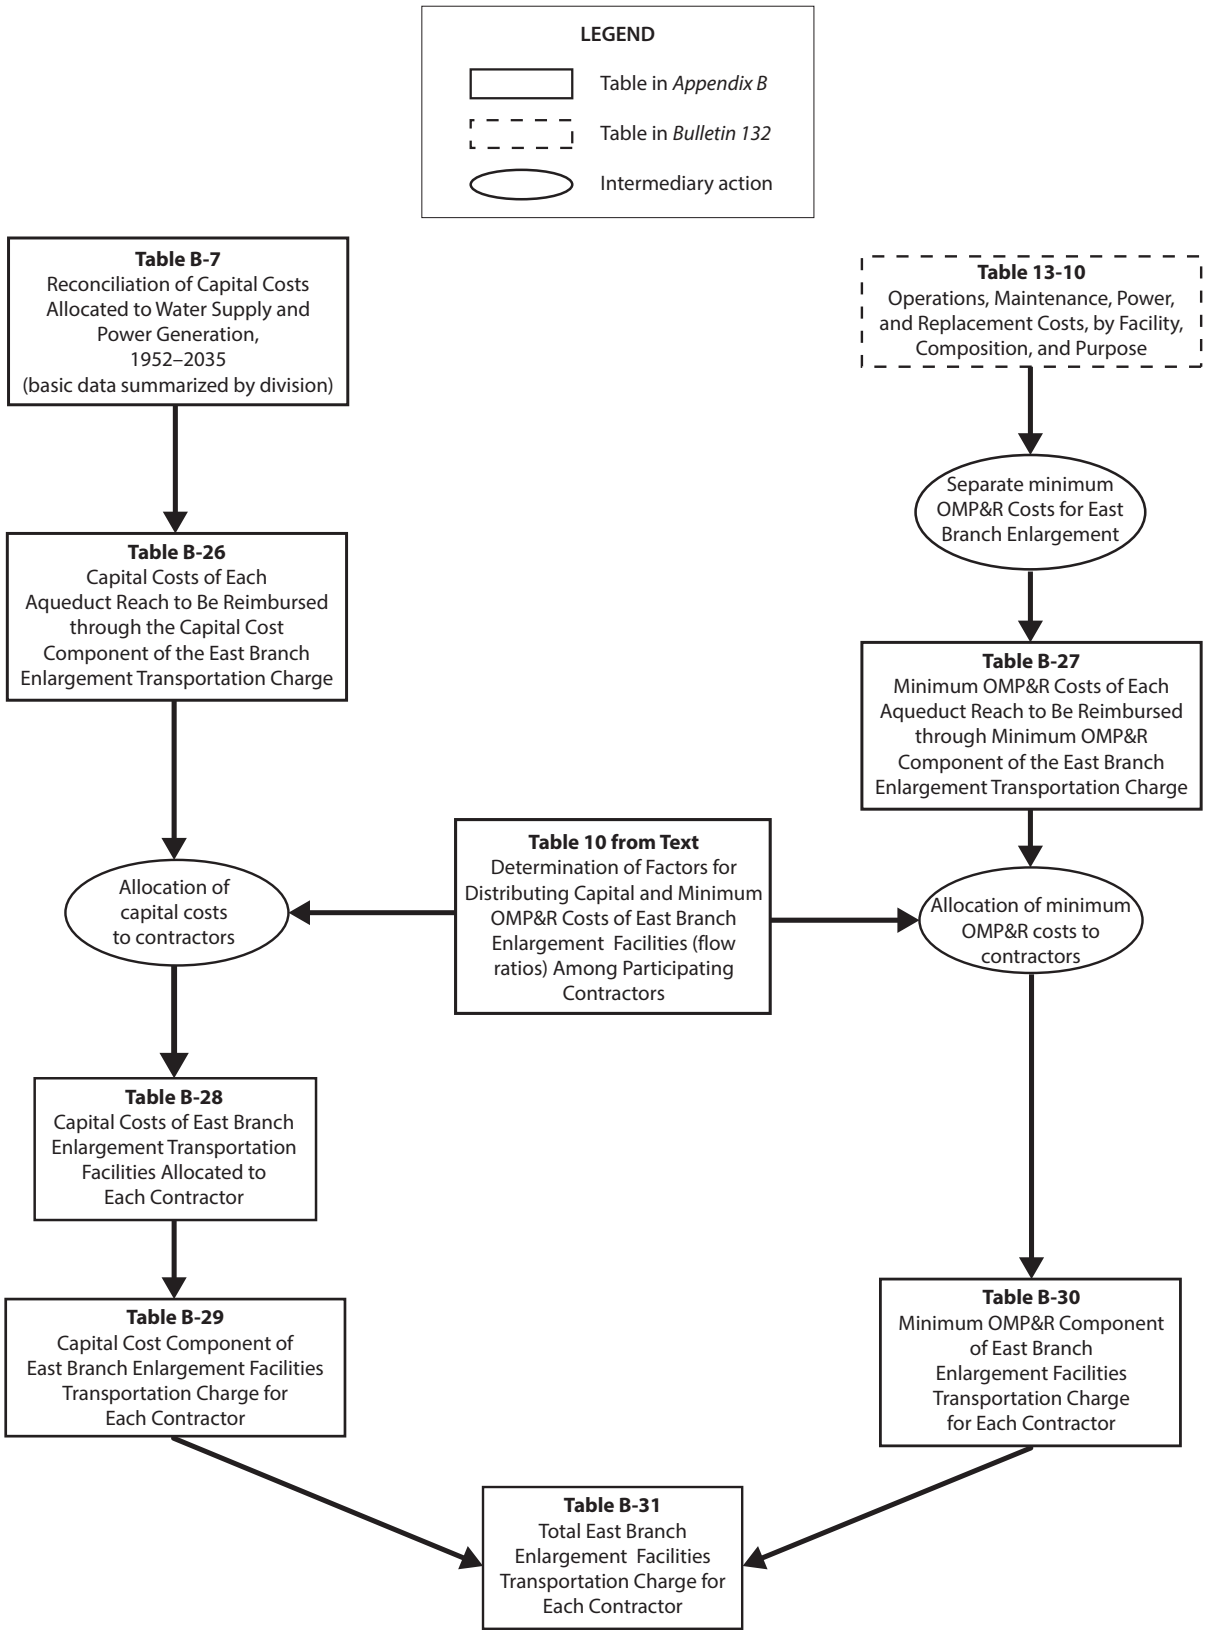

Figure B-2 Relationships of Data Used to Substantiate East Branch Enlargement Charges

- Antelope Dam and Lake
- Oroville Dam and Lake Oroville
- Oroville power facilities
- Delta facilities
- Suisun Marsh facilities
- Yolo Bypass
- A portion of the California Aqueduct from the Delta to Dos Amigos Pumping Plant
- Sisk Dam, San Luis Reservoir, and Gianelli Pumping-Generating Plant

Project Transportation Facilities

- Grizzly Valley Pipeline
- North Bay Aqueduct
- South Bay Aqueduct, including Del Valle Dam and Lake Del Valle
- the remainder of the California Aqueduct from the Delta to Dos Amigos Pumping Plant and all facilities south, including dams and lakes in Southern California
- Off-Aqueduct Power Facilities (Reid Gardner Unit No. 4, Bottlerock Powerplant, and South Geysers Powerplant)

The standard provisions provide for a Delta Water Charge and a Transportation Charge for project water. After the Billing Transition Date of the contract extension amendment, there will be two methodologies for recovering charges. Costs incurred prior to the January 1, 2024, Billing Transition Date will be collected under the original provisions of the water supply contracts (Freeze or FZ). Costs incurred on or after the Billing Transition Date will be collected under the contract extension amendment provisions of the water suppy contracts (PayGo or PG).

The Freeze (FZ) Delta Water Charge is a unit charge applied to each acre-foot of SWP water the SWP water contractors are to receive, in accordance with their contracts. The unit charge, if applied to each acre-foot of all such allocations for the remainder of the project repayment period, is calculated to result in repayment of all outstanding reimbursable costs of the Project Conservation Facilities, with appropriate interest, by the end of the repayment period (2035).

The Delta Water Rate (PG) is also a unit charge applied to each acre-foot of SWP water under the water supply contracts (PayGo, until 2085). Under PayGo billing provisions, the costs are billed prospectively and are collected based on annual Table A amounts not over the extended project repayment period.

The Transportation Charge is for use of facilities to transport water to the vicinity of each SWP water contractor's turnout(s). Generally, the annual charge represents each SWP water contractor's proportionate share of the reimbursable capital costs and operating costs of the Project Transportation Facilities.

Each SWP water contractor's allocated share of those reimbursable capital costs is amortized for repayment to DWR, and certain variations are allowed in the amortization methods. SWP water contractors' shares of reimbursable operating costs are repaid in the year such costs are incurred by DWR.

The East Branch Enlargement Transportation Charge is paid by the seven Southern California SWP water contractors participating in the enlargement. San Bernardino Valley Municipal Water District advanced funds to pay the district's allocated capital costs for the East Branch Enlargement. The remaining six SWP water contractors pay an allocated share of the debt service on revenue bonds sold to finance the enlargement. Each SWP water contractor will also pay an allocated share of the minimum operation, maintenance, power, and replacement (OMP&R) costs of the East Branch Enlargement.

Transportation Charges for the Coastal Branch Extension, East Branch Extension, and South Bay Enlargement are being repaid by SWP water contractors in their respective service areas.

Composition and Timing of Water Charges

As shown on *Figure B-3*, the Delta Water Charge and the Transportation Charge consist of the following three components:

(1) conservation and transportation capital cost components, which will return to DWR all reimbursable capital costs;
(2) conservation and transportation minimum OMP&R components, which will return to DWR all reimbursable operating costs that do not depend on or vary with quantities of water actually delivered to the SWP water contractors; and
(3) a transportation variable OMP&R component, which will return to DWR all reimbursable operating costs that depend on and vary with quantities of water actually delivered to the SWP water contractors.

The formula for computing the Delta Water Rate—Freeze, Article 22(f) of the Standard Provisions for Water Supply Contract, was designed to ensure that all adjustments for prior overpayments or underpayments of the Delta Water Charge are accounted for in a redetermination of the rate. Since the redetermined rate applies to all future allocations, costs incurred prior to the Billing Transition Date are amortized during the remainder of the original project repayment period, 2035. This appendix includes a redetermination of the Delta Water Rate—Freeze (Table B-20A FZ and B-20B FZ) and a determination of the Delta Water Rate PayGo (Table B-20B PG CAP/MIN) for 2026.

Article 28 of the standard provisions stipulates that Transportation Charges be redetermined each year. The tables in Appendix B include the numerical data used in this redetermination. Transportation Charges for prior years through 2025, included in those tables, are the redetermined amounts and do not equal the amounts actually paid by SWP water contractors.

As provided under the Water System Revenue Bond Amendment to the water supply contracts, differences between actual payments under the Transportation capital cost component and amounts computed in this redetermination are accumulated with interest and amortized during the remaining years of the contract repayment period. All computations for adjustments are included in the attachments accompanying each SWP water contractor's Statement of Charges and are reflected in Attachment 3 FZ and PG, which is furnished to each SWP water contractor in its annual Statement of Charges.

These redeterminations exclude three charges associated with water service other than the Delta Water Charge and the Transportation Charge. The excluded charges (and the manner in which they are treated in this appendix) are outlined below.

(1) Advances of funds pursuant to Article 24(d) of the standard provisions for excess capacity constructed by DWR at the request of SWP water contractors.
(2) Advances of funds pursuant to Article 10(d) of the standard provisions for delivery structures (turnouts) constructed by DWR at the request of SWP water contractors. Partial information concerning actual and projected capital costs of such delivery structures is included in this appendix. Statements concerning these costs and data are furnished to the appropriate SWP water contractors at

Delta Water Charge

Capital Cost Component

1. Planning, design, right-of-way, and construction costs of Conservation Facilities
2. Operations and maintenance (O&M) costs for newly constructed Conservation Facilities prior to initial operations
3. Activation costs for newly constructed Conservation Facilities
4. Power costs allocated to initial filling of San Luis Reservoir
5. Capitalized O&M costs (major repair work and so forth) for Conservation Facilities
6. Program costs (portion) to mitigate impacts on current Delta fishery population due to State Water Project (SWP) pumping prior to 1986 (Department of Water Resources-Department of Fish and Wildlife agreement)

Minimum Operations, Maintenance, Power, and Replacement (OMP&R) Component

1. Direct O&M costs of Conservation Facilities
2. General O&M costs allocated to Conservation Facilities
   a. Accounting Office (portion)
   b. Financial and contract administration (portion)
   c. Water rights
   d. Power planning for SWP facilities (portion)
3. Replacement deposits for SWP control centers (portion)
4. Credits for a portion of Hyatt-Thermalito power generation
5. Power costs and credits related to pumping water to San Luis Reservoir for project operations (storage changes)
6. Value of power used and generated by Gianelli Pumping-Generating Plant
7. Program costs (portion) to offset annual fish losses resulting from pumping at Banks Pumping Plant (Department of Water Resources-Department of Fish and Wildlife agreement)

Transportation Charge

Capital Cost Component

1. Planning, design, right-of-way, and construction costs of Transportation Facilities
2. Operations and maintenance (O&M) costs for newly constructed Transportation Facilities prior to initial operation
3. Activation costs for newly constructed Transportation Facilities
4. Power costs allocated to initial filling of Southern California reservoirs
5. Capitalized O&M costs (e.g., major repair work) for Transportation Facilities
6. Program costs (portion) to mitigate impacts on current Delta fishery population due to SWP pumping prior to 1986 (Department of Water Resources-Department of Fish and Wildlife agreement)

Minimum OMP&R Component

1. Direct O&M costs of Transportation Facilities
   a. Headquarters and field divisions (portion)
   b. Insurance and Federal Energy Regulatory Commission (FERC) costs (portion)
2. General O&M costs related to Transportation Facilities
   a. Accounting Office (portion)
   b. Financial and contract administration (portion)
   c. Power planning for SWP facilities (portion)
3. Power costs and credits related to pumping water to Southern California reservoirs for project operations (storage changes)
4. Power costs for pumping water to replenish losses from Transportation Facilities (downstream costs)
5. Other power costs
   a. Station service at Transportation Facility power and pumping plants
   b. Certain transmission service costs (transmission access charges, downstream costs, etc.)
6. Replacement deposits for SWP control centers (portion)
7. Off-Aqueduct Power Facility costs—bond service, bond cover costs (25 percent of bond service), bond reserves, transmission service costs, fuel costs, taxes, and O&M—less power sales allocated to Off-Aqueduct Power Facilities
8. Program costs (portion to offset annual fish losses resulting from pumping at Banks Pumping Plant (Department of Water Resources-Department of Fish and Wildlife agreement)

Variable OMP&R Component

1. Power purchase costs
   a. Capacity
   b. Energy
   c. Pine Flat Powerplant bond service, O&M, and transmission costs allocated to aqueduct pumping plants
2. Alamo, Devil Canyon, Warne, and Castaic power generation credited at the power plant reach and charged to aqueduct pumping plants
3. Hyatt-Thermalito Diversion Dam Powerplant generation charged to aqueduct pumping plants (credits for this generation are reflected in the Delta Water Rate)
4. Replacement deposits for equipment at pumping plants and power plants
5. Credits from sale of excess SWP system power
6. Program costs (portion) to offset annual fish losses resulting from pumping at Banks Pumping Plant (Department of Water Resources-Department of Fish and Wildlife agreement)

Note: Excludes costs recovered under the East Branch Enlargement Transportation Charge.

Figure B-3 Composition of Delta Water Charge and Transportation Charge

various times and are not part of the annual statements.

(3) Payments for sale and service of surplus water to entities other than SWP water contractors, pursuant to Article 21 of the standard provisions, are also excluded. Those payments are generally based on the unit rates shown in Table B-25. Net revenues resulting from non-SWP water contractor service are applied as indicated on page 24 of Bulletin 132-71.

Time and method of payment for corresponding components of the Delta Water Charge and the Transportation Charge are as follows.

(1) The capital cost components of the Delta Water Charge and the Transportation Charge are paid in two semiannual installments, due January 1 and July 1 of each year, based on statements furnished by DWR on or before July 1 of the preceding year.

(2) The minimum OMP&R components of the Delta Water Charge and the Transportation Charge are paid in 12 equal installments due the first of each month and based on statements furnished by DWR on or before July 1 of the preceding year.

(3) The variable OMP&R component of the Transportation Charge is paid in varying monthly amounts and is due the fifteenth day of the second month following actual water delivery. The charges are projected based on a unit charge per acre-foot established on or before July 1 of the preceding year. Those unit charges may be revised during the year to reflect current power costs and revenues. The unit charges are applied to actual monthly delivery quantities as determined by DWR on or before the fifteenth day of the month following actual water delivery.

Bases for Allocating Reimbursable Costs Among SWP Water Contractors

This section describes procedures for allocating reimbursable costs of Project Transportation Facilities among SWP water contractors (see upper right portion of *Figure B-1*). Those costs do not include annual costs of Off-Aqueduct Power Facilities, which are explained in the "Project Water Charges" section (Table 5 and Table 6).

Capital and Minimum OMP&R Costs

Figure B-4 includes information about the repayment reaches that form the basis for allocating reimbursable costs of the Project Transportation Facilities among SWP water contractors.

Allocations of reimbursable capital costs and minimum OMP&R costs of each reach are based on the proportionate maximum use of that reach by respective SWP water contractors under planned conditions of full development.

The derivation of ratios that represent the proportionate maximum use of each aqueduct reach by the respective SWP water contractors was first reported in Bulletin 132-70 (page 103). The ratios in Bulletin 132-70 were subsequently revised for the North Bay Aqueduct, the South Bay Aqueduct, the California Aqueduct from the Delta to Castaic Lake, and the Coastal Branch.

All the revisions reported in previous bulletins regarding the derivation of ratios that represent the proportionate maximum use of each aqueduct reach by the respective SWP water contractors were last reported in Tables B-1 and B-2 of Bulletin 132-91. Under Article 53 of the Monterey Amendment, agricultural SWP water contractors may sell up to 130,000 acre-feet of aqueduct

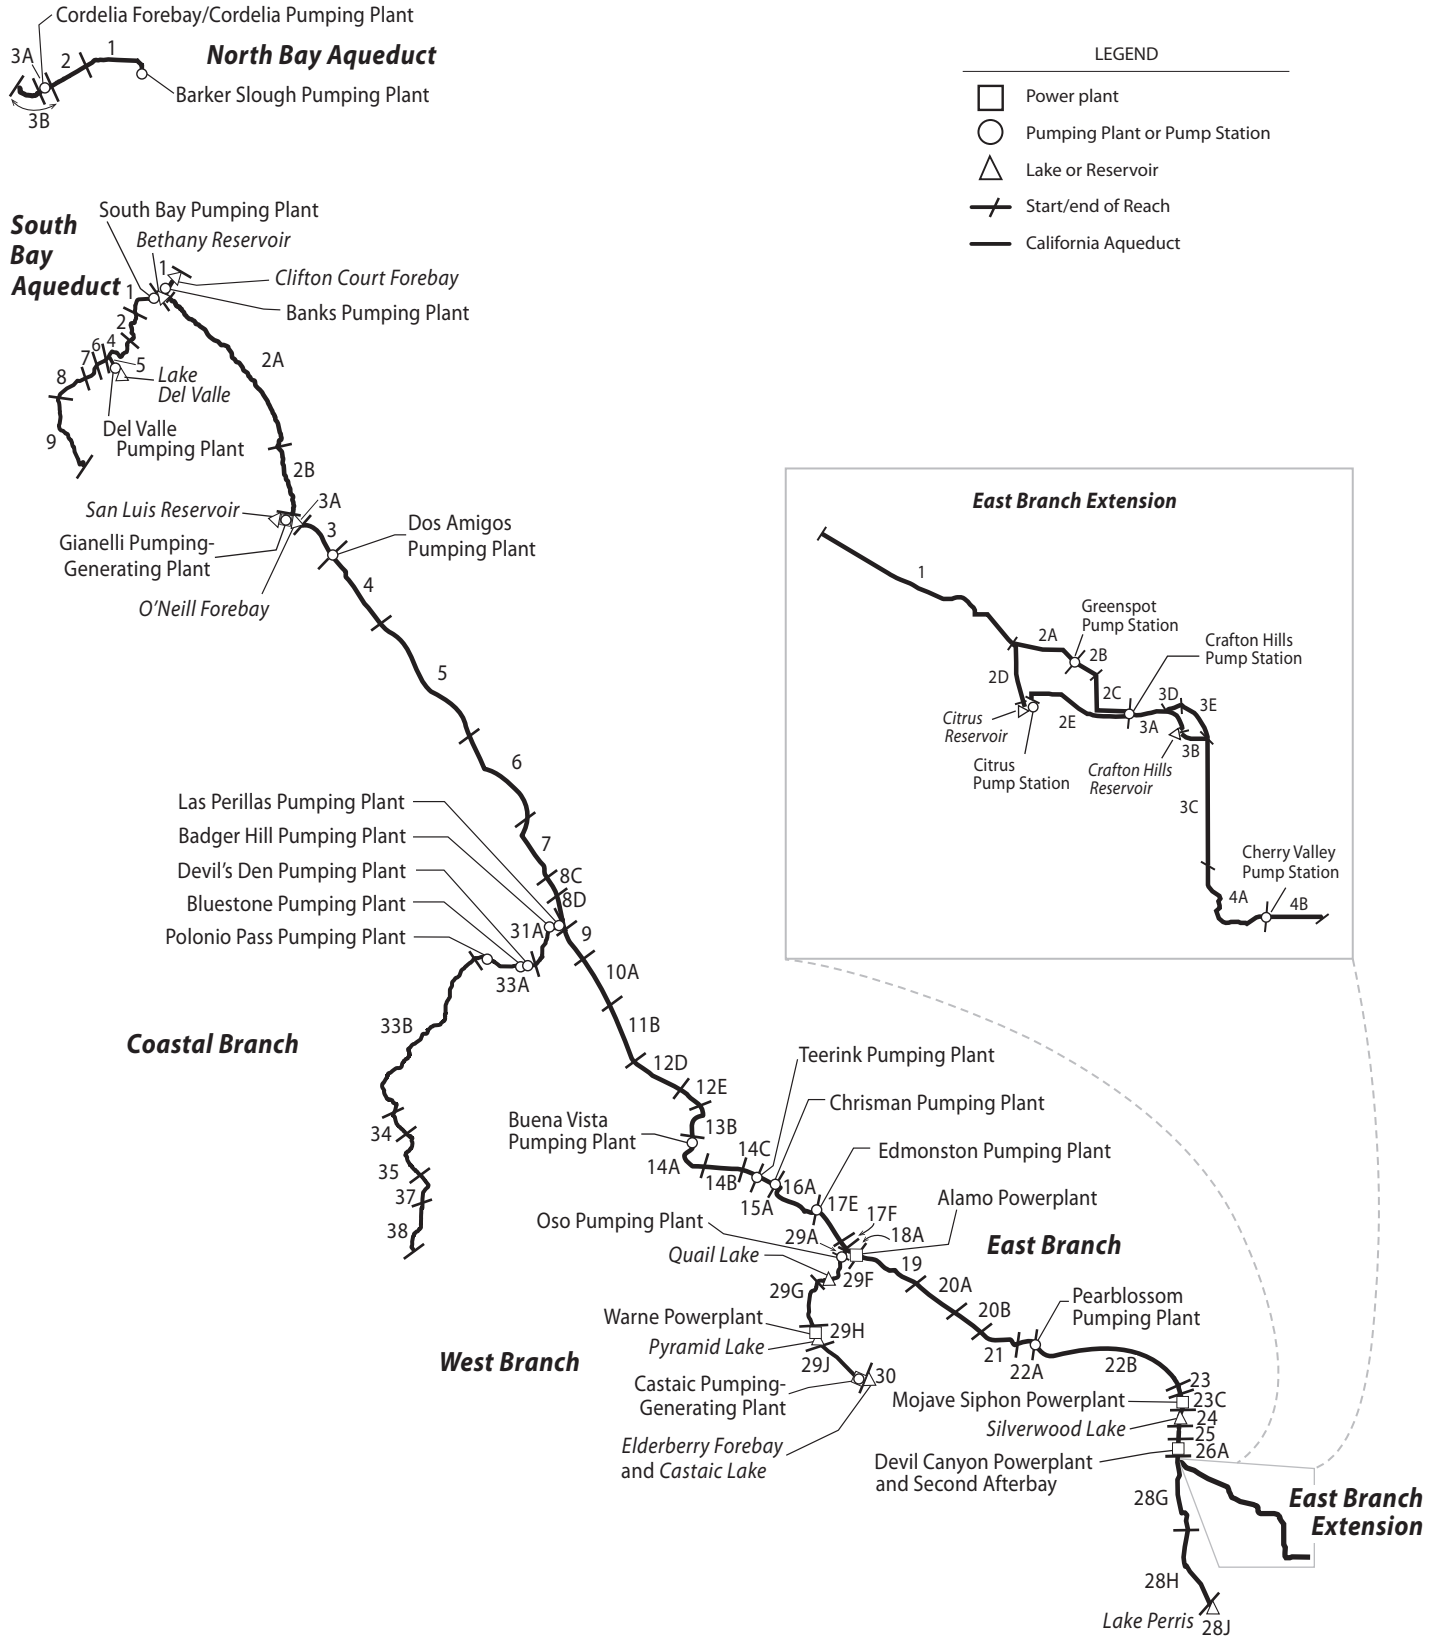

Figure B-4 Repayment Reaches and Descriptions

North Bay Aqueduct

1	Barker Slough through Fairfield/Vacaville Turnout
2	Fairfield/Vacaville Turnout to Cordelia Forebay

Subtotal outside of Article 53		*163,639*		

[1] Castaic Lake Water Agency's SWP Water Supply Contract was transferred to Santa Clarita Valley Water Agency effective November 2, 2018.

capacity to municipal and industrial SWP water contractors. The first permanent transfer occurred in 1998. Currently, 114,000 acre-feet of the allowable capacity has been transferred. *Table 1* shows the permanent capacity transfers that have taken place since the Monterey Amendment was implemented in 1995.

Table B-1 presents the reach ratios currently applicable to reimbursable capital costs. These reach ratios do not reflect the permanent capacity transfers.

Table B-2 presents corresponding ratios for allocating 2026 and after reimbursable

minimum OMP&R costs among SWP water contractors. Requested excess capacity is omitted when deriving ratios applicable to capital costs because the capital costs for the excess capacity are paid on an incremental-cost basis and not a proportionate-use basis. However, requested excess capacity is accounted for in the ratios applicable to minimum OMP&R costs.

Variable OMP&R Costs

Article 26(a) includes provisions to ensure that the variable OMP&R component of the Transportation Charge will result in a return to DWR of those costs that depend on and vary with the amount of SWP water deliveries. (The minimum OMP&R component results in a return of those operating costs that do not vary with deliveries.) Under Article 26(a) all such costs for a reach for a given year will be allocated among SWP water contractors in proportion to the actual annual use of that reach by the respective SWP water contractors.

Table B-3 summarizes the total power costs, credits, and transmission costs for each aqueduct pumping and power recovery plant. Variable costs are as follows.

- Costs of capacity and energy used exclusive of associated power transmission and station service costs that are based on power usage (transmission and station service costs that are independent of power usage are classified as minimum OMP&R costs).
- Credits for capacity and energy produced at aqueduct power recovery plants (treated as credits).
- Beginning in 2005, a portion of transmission expenditures that will depend on and vary with water and power usage. These costs will be included as part of the variable component.

Table B-3 excludes plant capacity and energy costs associated with surplus and unscheduled water service after May 1, 1973. Prior to that date, surplus water service was charged the same unit variable OMP&R component as allocated water service. An amendment to the water supply contracts in 1973 significantly changed the rate structure for surplus water service. Capacity and energy costs for pumping surplus and unscheduled water were allocated directly to those SWP water contractors receiving surplus and unscheduled water service. A contract amendment in 1991 again revised the rate structure to provide for payment of costs through a melded power rate. These revisions to charges for surplus and unscheduled water are effective from the date of the amendments and are not applied to past charges.

An interruptible water program was established in 1994. This program, later renamed as the Article 21 program, is based on individual annual contracts; costs for Article 21 water actually delivered are included in Table B-3.

Water Conveyance

Tables B-4, B-5A, B-5A-Adj, B-5B, and B-6 present water conveyance quantities that form the basis for allocating costs.

Table B-4 presents the schedules of annual allocations as set forth in Table A and Article 6(a) of each water supply contract.

Table B-5A shows amounts of actual and projected allocated water quantities delivered from each aqueduct reach to each SWP contractor. Projected deliveries for years 2024 through 2035 are based on SWP water contractors' requests for future water deliveries. The quantities included in Table B-5A also include non-project water delivered to SWP water contractors, surplus water deliveries prior to May 1, 1973, and actual Article 21 water deliveries in 1994 and thereafter.

Table B-5A-Adj presents a summary of accounting adjustments that result from water deliveries not originating from the Sacramento-San Joaquin Delta (Delta). The methodologies used to calculate various components are based on cumulative charges from the Delta through facilities conveying water to a specific repayment reach. When water is introduced to the SWP downstream of the Delta, SWP water contractors require an adjustment, or credit, for those facilities not used to convey the water.

Table B-5B presents a summary of actual and projected annual allocated water quantities for each SWP water contractor. The quantities also include amounts of non-project water and surplus water delivered prior to May 1, 1973, and actual deliveries of Article 21 water in 1994 and thereafter.

Table B-6 summarizes the annual allocated water quantities conveyed (actual) or to be conveyed (projected) through each aqueduct pumping plant or power plant. While most water delivered to contractors is conveyed through Transportation Facilities, San Luis Reservoir is a Conservation Facility, and a portion of first three reaches of the California Aqueduct are split conservation and transportation facilities. Below are the B-6 water classifications and any relevant details related to those classifications.

- *Initial Fill.* Water required for initial filling of the system and reservoirs or for repayment of pre-consolidation water used during construction. The energy cost of this water was recovered under the capital cost component.
- *Operational Gains/Losses*. Water gains and losses due to seepage, evaporation, and water accounting from all downstream reaches.
- *Reservoir Storage Changes*. Excluding the initial fill, reservoir storage changes represent the annual net storage or draw down of a reservoir. When a reservoir is filled (excluding the initial fill), the variable costs are collected under the minimum component. When there is a net reservoir storage drawn down, the costs remain in the variable component and are recovered from the contractor(s) who took delivery of the water, and a credit is applied to the minimum component so the contractors who did not take the water recover their contribution for the previous reservoir storage costs.
- *Deliveries*:
  - » *Water Supply*. Water delivered to a turnout for an SWP contractor.
  - » *Recreation*. Water delivered for purpose of recreation or fish and wildlife enhancements. The associated energy costs are not recoverable from the SWP Contractors.
- *Conservation Water*. Conservation water applies to the San Luis Reservoir. Conservation water includes the initial fill water, operation losses, and storage changes associated with San Luis Reservoir and the portion of the California Aqueduct allocated to conservation.

Water accounting practices assume deliveries are made from the Delta. However, offsetting credits are applied for deliveries made from facilities south of the Delta. If water is used to fill a reservoir, the power costs are transferred to the minimum component from the Delta to the reservoir. When the reservoir is drawn down for water supply deliveries, the power costs associated with the drawn down water is returned to the minimum at the current year's variable rate and the contractor(s) who took delivery of the water receive a variable charge for the power costs as if the water were delivered from the Delta. Thus, the variable OMP&R rates per acre-foot found in B-17 can be applied to both transactions.

Reservoir storage changes also include SWP water placed in Southern California groundwater between 1978 and 1982 (as a positive value). Water was withdrawn from that storage and delivered to SWP water contractors in 1979, 1982, 1987, 1988, 1989 (as negative amounts).

Table B-6 also includes amounts of non-project water and non-surplus water that was delivered prior to May 1, 1973; and actual deliveries of Article 21 water in 1994 and thereafter.

San Luis Reservoir is operated to conserve water for future delivery to downstream SWP water contractors. To account for costs associated with reservoir storage, the power and replacement costs of Banks Pumping Plant (a joint Transportation-Conservation Facility) that are allocated to the conveyance of annual conservation water quantities are transferred to the capital costs of San Luis Reservoir (during initial fill) or to the minimum OMP&R costs of San Luis Reservoir (following initial fill).

In years of a net storage increase at San Luis Reservoir, a portion of the variable OMP&R costs is transferred to the minimum OMP&R costs of Banks Pumping Plant. That transfer is equal to the variable OMP&R cost per acre-foot of delivery through Banks Pumping Plant for that year, multiplied by the acre-feet of deliveries derived from San Luis Reservoir storage for that year. Table B-6 also includes amounts of non-project water and surplus water delivered prior to May 1, 1973, and actual deliveries of Article 21 water in 1994 and thereafter.

Bases for Reimbursable Costs

This section describes the methods used to derive the costs allocated by the procedures outlined in the preceding section. A diagram of the cost derivation process is shown at the top of *Figure B-1*.

First, the capital and minimum OMP&R costs of all SWP facilities are allocated among the various project purposes in accordance with the allocation percentages in *Table 2*. Those percentages may be subject to revision in the future.

The redeterminations in this appendix involve only the SWP costs that are allocated to water supply and power generation.

Capital Costs

Capital costs used in the redeterminations in this appendix reflect costs as of December 31, 2024.

Table B-7 presents a reconciliation of estimated total capital costs of each Project Conservation Facility and each Project Transportation Facility. This table shows the relationship of Project Conservation and Transportation costs allocated to SWP water contractors (Tables B-8, B-9, B-10, and B-13) to the total SWP capital costs projected by DWR.

Table B-8 shows costs incurred and projected to be incurred by DWR in connection with each SWP water contractor's turnouts. Costs incurred by DWR for both State-constructed and SWP contractor-constructed delivery structures are paid directly by the SWP water contractors for which the structures are built. DWR incurs design review and construction inspection costs in connection with SWP contractor-constructed turnouts.

Table B-9 lists costs and payments for excess capacity built into SWP Transportation Facilities in accordance with amendments to contracts with The Metropolitan Water District of Southern California (Metropolitan), San Gabriel Valley Municipal Water District, and Antelope Valley-East Kern Water Agency, including the following:

- additional costs incurred by DWR for requested excess capacity;

Table 2 Project Purpose Cost Allocation Factors (percentages)[1]

PROJECT FACILITIES	Water Supply and Power Generation		All Other Purposes (Nonreimbursable)	
	Capital Costs	Minimum OMP&R Costs	Capital Costs	Minimum OMP&R Costs
Project Conservation Facilities				
Frenchman Dam and Lake	21.5	0.0	78.5	100.0

Coastal Branch	100.0	100.0	0.0	0.0

[1] Percentages indicated apply to the majority of the facilities with minor exceptions.
[2] Percentages indicated are applicable to the remaining costs of division after excluding costs allocated to flood control that are reimbursed by the federal government (22 percent of capital costs) and excluding specific power costs of Hyatt and Thermalito powerplants and switchyards.
[a] Percentage indicated consists of 48.0 percent of costs allocated to recreation and 26.8 percent to flood control.
[b] Percentage indicated consists of 44.9 percent of costs allocated to recreation and 33.1 percent to flood control.
[c] Percentage indicated is used for 2012 and previous years.
[d] Percentage indicated is used for 2013 and forward.

- advances by SWP water contractors of funds for such costs; and
- credits for advances in excess of costs which were applied to respective SWP water contractors' installments of the capital cost component of the Transportation Charge in 1981.

Under Amendment 2 of Metropolitan's contract, 809 cubic feet per second of excess capacity was originally constructed in reaches of the West Branch at Metropolitan's request. That capacity was reclassified as basic capacity of SWP Transportation Facilities under Amendment 7. Metropolitan paid $16.3 million as a prepayment of the capital cost component of the Transportation Charge for the original requested capacity.

Amendment 5 to Metropolitan's contract requires that additional costs for modifications to the Santa Ana Pipeline

(required for enlargement of Lake Perris) will be allocated to Metropolitan and returned to DWR through payments of the Transportation Charge. The additional costs to be repaid through Metropolitan's capital cost component for the aqueduct reach from Devil Canyon Powerplant to Barton Road total about $6.7 million (see Bulletin 132-72, page 98).

Table B-10 presents the actual and projected annual capital costs of each aqueduct reach that will eventually be returned to DWR. For costs incurred prior to the Billing Transition Date, the costs will be collected with interest through SWP water contractors' payments of the capital cost component of the Transportation Charge and payment of debt service under the Devil Canyon-Castaic contracts. For costs incurred on or after the Billing Transition Date, costs will be recovered under the provisions in Article 24(b)(4).

Table B-10 PG presents the actual and projected annual debt service of each aqueduct reach for costs incurred after the Billing Transition Date (2024).

Annual Operating Costs

Annual operating costs allocable to water supply and power generation are returned to DWR through the minimum OMP&R components of the Delta Water Charge and the Transportation Charge and through a portion of the revenues from energy sales. All reimbursable operating costs of Project Conservation Facilities are included in the minimum OMP&R component of the Delta Water Charge.

Transportation and Devil Canyon-Castaic Contract Costs

Table B-11 shows the amounts of the actual and projected costs to be reimbursed through payments of the minimum OMP&R component of the Transportation Charge and allocated operating costs under the Devil Canyon-Castaic contract. The Devil Canyon-Castaic contract ended in calendar year 2022, all debt service obligations were repaid, and the operations and maintenance repayment provisions of the agreement are no longer applicable starting with the 2023 Statements of Charges.

The table includes the following seven types of operating costs incurred annually that do not vary with water quantities delivered to the SWP water contractors:

(1) all direct labor charges for field operation and maintenance personnel, including associated indirect costs;

(2) a distributed share of general operating costs that cannot be identified solely with one facility or aqueduct reach;

(3) all electric power transmission and station service costs up to 2004, and electric power transmission and station service costs for 2005 and after that do not vary with power usage allocable to aqueduct pumping and recovery plants;

(4) all costs for equipment, materials, and supplies;

(5) portions of the power and replacement costs of all pumping plants and power plants that are up-aqueduct from Devil Canyon Powerplant and Castaic Powerplant and that are allocable to the annual conveyance of water lost to evaporation and seepage from respective aqueduct reaches or placed into storage in respective reservoirs of the Project Transportation Facilities (after initial fill);

(6) credits, which offset those costs in (5) above, for deliveries drawn from reservoir storage; and

(7) projected operating costs (labor only) were not escalated for calendar years 2026 and 2027, and escalation of certain projected operating costs (labor and operating expense) were 1 percent per year for 2028–2035.

Table B-12 shows the portions of variable OMP&R costs in Table B-3 that are allocable

to the water delivery quantities included in Table B-6 and reimbursed through payments of the variable OMP&R component of the Transportation Charge.

To derive Table B-12 costs, the following adjustments are made to Table B-3 costs.

(1) Part of the variable OMP&R costs of each plant is allocated to recreation. The allocation to recreation is in proportion to the quantity of water conveyed through each plant each year for delivery. That portion of variable plant costs attributable to the initial fill of aqueduct reaches is allocated to the joint capital costs of respective down-aqueduct reaches and reservoirs.

(2) That portion of costs attributable to operational losses and gains is allocated to the joint minimum OMP&R costs of respective down-aqueduct reaches and reservoirs.

(3) Adjustments are made for additions or withdrawals from storage in aqueduct reservoirs. In years when water is added to storage in aqueduct reservoirs, the cost of conveying this water into storage is charged to the minimum OMP&R costs of the corresponding reservoir. In years when storage in reservoirs is decreased for the purpose of making deliveries, a credit is applied to the minimum OMP&R costs of the reservoir from which the storage is released. This credit is equal to the number of acre-feet of storage reduction times the variable OMP&R unit rate for the year the storage is released. The unit rate is equal to the variable OMP&R unit rate for the year the water is taken from storage.

(4) That portion of costs attributable to pumping water to replace operational losses and gains and for additions or withdrawals from storage in San Luis Reservoir is charged to the minimum OMP&R component of the Delta Water Rate.

The remaining costs are allocated to transportation water supply and repaid by the SWP water contractors.

Conservation Capital and Operating Costs

Table B-13 shows a summary of the actual and projected capital and operating costs of the initial Project Conservation Facilities. These costs are reimbursed through payments by the SWP Contractors under the Delta Water Change, Oroville power sales, and Gianelli Pumping-Generating Plant credits. Additionally, Table B-13 shows credits applied to the reimbursable capital costs of the initial Project Conservation Facilities in accordance with negotiated settlements concerning incurred planning costs for the periods from 1952 through 1978.

Table B13 PG-CAP shows the actual and projected capital debt service related costs, incurred after the billing transition date, associated with the Project Conservation Facilities that are to be reimbursed through the Delta Water Charge.

Table B-13 PG MIN shows a summary of the actual and projected operating costs of the Project Conservation Facilities that are reimbursed through payments by the SWP Contractors under minimum Delta Water Charge.

Project Water Charges

This section describes the redetermination of past and projected components of the Transportation Charge for annual revision of Attachment 3 FZ and PG of each Statement of Charges. This section also describes the derivation of the unit Delta Water Rates and the Water System Revenue Bond Surcharge.

A summary of equivalent unit charges for each acre-foot of allocated water service is also included for each SWP water contractor

and each aqueduct reach. A diagram of all calculations may be found on the lower half of *Figure B-1*.

Transportation Charges

The accumulation of allocated costs of each aqueduct reach to each SWP water contractor is the basis for the Transportation Charge components.

Table B-14 summarizes each SWP water contractor's share of the capital costs of the aqueduct reaches presented in Table B-10. Those amounts are determined by applying Proportionate Use of Facilities Factors (PUFFs) set forth in Table B-1 to the costs in Table B-10. The resulting allocated costs are set forth in Attachment 3 FZ and PG of the Statements of Charges.

Prepayments of the capital cost component, required under Metropolitan's Amendment 7, are included as negative capital costs in Table B-14 and Attachment 3 FZ of Metropolitan's Statement of Charges. Solano County Water Agency, Empire West Side Irrigation District, and Santa Clarita Valley Water Agency also prepaid capital costs.

Both Table B-14 and Attachment 3 FZ of the six SWP water contractors for project water service below Devil Canyon Powerplant and Castaic Powerplant include the capital costs reimbursable under the Devil Canyon-Castaic contract.

Table B-15 FZ summarizes capital cost components of the Transportation Charge for each SWP water contractor for each year of the project repayment period. By the year 2035, the capital cost components shown in Table B-15 FZ will recover the costs incurred prior to the Billing Transition Date shown in Table B-14, with interest at the Project Interest Rate of 4.594 percent per annum and based on the year of the initial payment as described in *Table 3*.

Table 3 Criteria for Amortizing Capital Costs of Transportation Facilities

Contractor	Year of Initial Payment[1]
Alameda County Flood Control and Water Conservation District, Zone 7	1963[a]
Alameda County Water District	1963
Antelope Valley-East Kern Water Agency	1963
City of Yuba City	[b]
Coachella Valley Water District	1964
County of Butte	[b]
County of Kings	1968
Crestline-Lake Arrowhead Water Agency	1964
Desert Water Agency	1963[c]
Dudley Ridge Water District	1968[d]
Empire West Side Irrigation District	1968[d]
Kern County Water Agency	
Agricultural Use	1968[d]
Municipal and Industrial Use	1965
Littlerock Creek Irrigation District	1964
The Metropolitan Water District of Southern California	1963
Mojave Water Agency	1964
Napa County Flood Control and Water Conservation District	1966
Oak Flat Water District	1968
Palmdale Water District	1964
Plumas County Flood Control and Water Conservation District	1965
San Bernardino Valley Municipal Water District	1963
San Gabriel Valley Municipal Water District	1963[c]
San Gorgonio Pass Water Agency	1963[c]
San Luis Obispo County Flood Control and Water Conservation District	1964[e]
Santa Barbara County Flood Control and Water Conservation District	1964[e]
Santa Clara Valley Water District	1963
Santa Clarita Valley Water Agency	1964[f]
Solano County Water Agency	1973
Tulare Lake Basin Water Storage District	1968[d]
Ventura County Watershed Protection District	1964

[1] Allocated capital costs of transportation facilities amortized in equal annual installments unless otherwise noted.

[a] Principal payments on each annual capital cost prior to 1971 delayed until calendar year 1972, except payments for 1963.

[b] For City of Yuba City and County of Butte, payments for Delta Water Charge only.

[c] Payment deferred for 1963 and added to 1964 payment with accrued interest.

[d] For Dudley Ridge Water District, Empire West Side Irrigation District, Kern County Water Agency (agricultural use), Oak Flat Water District, and Tulare Lake Basin Water Storage District, according to Article 45 of the contracts for supply of agricultural water, capital costs of transportation facilities allocated to agricultural water supply are amortized by using an equivalent unit rate per acre-foot applied to the annual allocations (Table B-4) through the project repayment period.

[e] For San Luis Obispo and Santa Barbara, all principal and interest payments for costs of the Coastal Stub were deferred until 1976.

[f] Castaic Lake Water Agency's SWP Water Supply Contract was transferred to Santa Clarita Valley Water Agency effective November 2, 2018.

Table B-15 PG summarizes actual and projected charges for costs incurred on or after the Billing Transition Date (2024), shown in Tables B-10 and B-14 and related debt service in Table B-10 PG.

Those estimated components, subsequently adjusted for prior overpayments or underpayments, are included in Attachment 3 FZ and PG of the Statements of Charges.

Table B-15 FZ includes the debt service payments from contractors participating in the following project facilities in accordance with water supply contract amendments: Devil Canyon Powerplant and Castaic Powerplant, Coastal Branch Extension, East Branch Extension, and South Bay Aqueduct Enlargement.

Table B-16A summarizes the minimum OMP&R components of the Transportation Charge for each year of the project repayment period. Those estimated components, subsequently adjusted for prior overpayments or underpayments, are included in Attachment 3 FZ and PG of the Statements of Charges.

The total amounts included in Table B-16A are determined by applying the Proportionate Use of Facilities Factors (PUFFs) in Table B-2 to the reach costs in Table B-11 and adding Municipal Water Quality Investigation program costs to participating SWP water contractors.

Table B-16A excludes Off-Aqueduct Power Facility charges, which are included separately in Table B-16B. Both Table B-16A and Attachment 3 FZ and PG include the operating costs payable under the Devil Canyon-Castaic contract for the six SWP water contractors down-aqueduct from Devil Canyon Powerplant and Castaic Powerplant.

As part of operating agreements with DWR, Kern County Water Agency (Kern) was billed from 1969 through 1996 for any additional operating costs caused by early installation of units in Las Perillas and Badger Hill pumping plants by Berrenda Mesa Water District (see Bulletin 132-71, page 7). Under those agreements, a portion of minimum OMP&R costs of Reach 31A were assigned directly to Kern, as shown in *Table 4*, with the remaining reach costs allocated by application of the proportionate-use ratios.

Table 4 Minimum OMP&R Costs of Reach 31A Assigned Directly to Kern County Water Agency (in dollars)

Year	Direct Charges
1969	46,511
1970	46,302
1971	140,074
1972	95,017
1973	72,454
1974	100,692
1975	127,456
1976	138,504
1977	120,753
1978	157,652
1979	121,231
1980	150,728
1981	75,866
1982	82,805
1983	90,007
1984	107,468
1985	159,406
1986	137,241
1987	127,073
1988	130,924
1989	128,468
1990	138,234
1991	139,527
1992	185,370
1993	219,334
1994	364,196
1995	272,341
1996	322,123
Total	**3,997,767**

DWR purchased the last unit, Unit No. 6, at Las Perillas and Badger Hill pumping plants in early 1997 to provide pumping capacity for deliveries to Coastal Area SWP water contractors, which began in 1997.

As a result of the Monterey Amendment, settlement agreements were made. The costs associated with those settlements are to be allocated among all SWP water contractors in proportion to their maximum Table A amounts. As costs are incurred, related charges will be included in the SWP water contractors' annual Statements of Charges as part of the minimum. Between 2002 and 2010, the Monterey Amendment litigation costs recovered from SWP water contractors were $15.8 million.

Table B-16B summarizes annual Off-Aqueduct Power Facility charges allocated to each SWP water contractor, adjusted for prior overpayments or underpayments. Those charges are to repay all Off-Aqueduct Power costs, including bond service, deposits for reserves, operation and maintenance costs, fuel costs, taxes, and insurance.

Adopted October 1, 1979, the General Bond Resolution requires that sufficient revenues be collected each year to repay all of those costs. In addition, an amount totaling 25 percent of the annual bond service is collected each year to ensure that sufficient funds are available to cover all annual costs. Any revenues collected and not needed during the year are refunded to the SWP water contractors in the next year.

Table 5 summarizes Off-Aqueduct Power Facility charges and credits related to deliveries for 2024. The ongoing Reid Gardner Powerplant environmental remediation costs related to the Reid Gardner Powerplant contract expiration in 2013 are tracked independently from annual Reid Gardner operating costs.

Table 5 Summary of 2024 Off-Aqueduct Power Facility Charges and Credits (in dollars)

Charges by Item	
Reid Gardner Powerplant	0
Reid Gardner Closure Costs	1,620,209
Bottle Rock Powerplant	0
South Geysers Powerplant	0
Subtotal	*1,620,209*
Credits by Item	
Power Sales	0
Net Total Charge	**1,620,209**

Table 6 Projected Charges for Off-Aqueduct Power Facilities (in dollars)

Year	Total Annual Cost	25 Percent Bond Cover
2025	2,026,110	-
2026	**1,464,000**	**-**
2027	3,586,000	-
2028	7,578,000	-
2029	7,475,500	-
2030	3,392,500	-

2032	429,000	-
2033	0	-
2034	0	-
2035	0	-

Table 6 shows projected Off-Aqueduct Power Facility charges. Defeasance of Off-Aqueduct Power facilities bonds occurred in June 2016, so no debt service charges or bond cover are included. Additionally, Reid Gardner, Unit 4 Powerplant remediation costs are projected for calendar years 2025 through the end year of the new Table 6 data that is provided.

Annual Off-Aqueduct Power Facility charges are allocated among SWP water

contractors in proportion to the electrical energy required to pump allocated water for the year.

An interim adjustment in the allocation of Off-Aqueduct Power costs is made in May of each year, based on updated cost estimates and April revisions in water delivery schedules. An additional adjustment is made the following year based on actual water deliveries and actual costs for the year.

The energy required to pump each SWP contractor's water is calculated using the kilowatt-hour per acre-foot factors shown in *Table 7* for the pumping plants upstream from the delivery turnouts. The amounts shown include transmission losses.

Table B-17 presents a summary of actual and projected total variable OMP&R costs for each acre-foot conveyed through each aqueduct pumping plant and power plant for each year of the project. The following provisions are for calculating the variable OMP&R component of the Transportation Charge.

- An annual charge per acre-foot of projected water deliveries to all SWP water contractors served from or through each reach is determined so the projected variable OMP&R costs to be incurred for each reach will be returned to DWR.
- The total annual variable OMP&R component for any SWP contractor for a given reach is obtained by multiplying the unit charge associated with that reach by the quantity of water actually delivered from or through the reach to the SWP contractor.

The rates summarized in Table B-17 are for the recovery of transportation water supply-variable OMP&R costs. In order to calculate the rates, adjustments must be made to Table B-3. A description of the adjustments required to Table B-3 are provided in *Table B-12* (1), (2), (3), and (4).

Table 7 Kilowatt-Hour per Acre-Foot Factors for Allocating Off-Aqueduct Power Facility Costs

	kWh per acre-foot[1]	
Pumping Plant	At Plant	Cumulative from Delta
Barker Slough	223	223
Cordelia-Benicia	434	657
Cordelia-Vallejo	178	401
Cordelia-Napa	563	786
Banks (Delta)	296	296
South Bay (including Del Valle)	869	1,165
Dos Amigos	138	434
Buena Vista	242	676
Teerink	295	971
Chrisman	639	1,610
Edmonston	2,236	3,846
Pearblossom	703	4,549
Greenspot	871	5,420
Citrus	1,240	5,789
Crafton Hills	1,087	6,876
Cherry Valley	224	7,100
Oso	280	4,126
Las Perillas	77	511
Badger Hill	200	711
Devil's Den	705	1,416
Bluestone	705	2,121
Polonio Pass	705	2,826

[1] Includes transmission losses.

Variable OMP&R costs related to initial fill of facilities, operational losses and gains, reservoir storage changes, conservation storage changes, and recreation water deliveries are recovered as described in *Table B-12*. The Table B-17 rates are derived by dividing the adjusted Table B-3 costs described above by Table B-6 water supply quantities. However, certain costs included in Table B-3 for extra peaking service, which would otherwise constitute variable OMP&R costs, are assigned directly to SWP water contractors requesting this type of service (see Bulletin 132-71, page 21, and Water Service Contractors Council Memo No. 593,

July 10, 1970). Those costs are excluded from the unit charges shown in Table B-17. Peaking charges based on additional capacity ceased in 1983. Since 1984, costs are based on power market energy rates. The amounts of extra peaking charges for additional power costs are shown in *Tables 8 and 9*.

Unit rates shown in Table B-17 constitute the rates for the pumping plants and power plants listed. The cumulative rates constitute the total rates, cumulative from the Sacramento-San Joaquin Delta, and are applicable to deliveries from or downstream of the pumping plants and power plants. Extra peaking service costs are excluded.

Table B-18 shows the variable OMP&R components of the Transportation Charge for each SWP water contractor for each year of the project repayment period. Table B-18 is developed from the costs per acre-foot included in Table B-17 and the delivery quantities for each SWP water contractor from each reach as indicated in Table B-5A and Table B-5A-Adj, plus any costs for extra peaking service. Those estimated components, subsequently adjusted for prior overpayments or underpayments, are included in Attachment 3 FZ and PG of the Statements of Charges.

Table B-19 summarizes the annual Transportation Charges for each SWP water contractor (the sum of the corresponding amounts included in Tables B-15 FZ, B-15 PG, B-16A, B-16B, and B-18). Those estimated payments, subsequently adjusted for prior overpayments or underpayments, are set forth in Attachment 3 FZ and PG of the Statements of Charges.

In accordance with provisions of the Devil Canyon-Castaic contract, Table B-19 and Attachment 3 FZ and PG include amounts of debt service and operating cost payments due from the six SWP water contractors located down-aqueduct from Devil Canyon and Castaic power plants.

Delta Water Charges

Table B-20A FZ presents the calculation of the Delta Water Rate for costs incurred prior to the Billing Transition Date for the initial conservation facilities applicable in 2026 in accordance with the amended Article 22(e) and 22(g) of all 29 water supply contracts. The Delta Water Rate was calculated at a Project Interest Rate of 4.594 percent, based on Conservation Facility costs shown in Table B-13. That Delta Water Rate is used to compute projected Delta Water Charges under Article 53(i) for the SWP water contractors who have executed the Monterey Amendment.

Table B-20B FZ shows each component of the 2026 Delta Water Rate from Table B-20A FZ.

Table B-20B PG shows capital and minimum costs by conservation facility incurred on or after the Billing Transition Date.

Table B-21 FZ summarizes the annual Delta Water Charge for each SWP contractor. The projected charges in Table B-21 are developed by multiplying the total rate per acre-foot, as shown in Table B-20A FZ, by the amount of allocated water for each SWP contractor, as shown in Table B-4.

Table B-21 PG summarizes the annual Delta Water Charge for each SWP contractor. The projected charges in Table B-21 PG are calculated by multiplying the Delta Water Rate per acre-foot, as shown in Table B-20B PG, by the amount of allocated water for each SWP contractor, as shown in Table B-4.

Water System Revenue Bond Surcharge

Table B-22 summarizes the Water System Revenue Bond Surcharge to the capital

Total	**5,893**	**7,653**	**34,577**	**13,644**	**3,521**	**55,250**	**5,974**	**1,620,176**	**3,692**	**2,017**	**102,158**	**123,049**	**24,983**	**41,156**	**2,439**	**74,749**	**53,741**	**9,858**	**2,184,530**

cost component of the Delta Water Charge and Transportation Charge for each SWP water contractor. The surcharge shown in Table B-22 is the difference between the capital cost component and the financing costs of Water System Revenue Bond Series B through Series BF. This surcharge is levied according to an amendment to the water supply contracts, which was signed by all of the SWP water contractors.

Total Water Charges

Table B-23 summarizes the total annual charges to each SWP contractor (the sum of the Transportation Charge in Table B-19, the Delta Water Charge in Table B-21, and the Water System Revenue Bond Surcharge in Table B-22). The charges do not reflect past payments by SWP water contractors and are unadjusted for prior overpayments or underpayments.

Equivalent Total Water Charges

Table B-24 FZ and *Table B-24 PG* presents the Transportation Charge and Delta Water Charge in terms of the equivalent unit charge for each acre-foot of allocated water now projected for delivery to the respective SWP water contractors.

The equivalent unit Delta Water Charges included in Table B-24 are greater than those presented in Table B-20A because water deliveries are less than the amounts shown in Table B-4.

Equivalent Water Costs by Reach

Table B-25 FZ and *Table-25 PG* presents a summary of the equivalent unit transportation cost of conveying allocated water through respective aqueduct reaches of the Project Transportation Facilities.

Those unit costs provide the basis of charges assessed for extra service (such as delivery of allocations down-aqueduct from a SWP water contractor's turnout) and for wheeling service to entities other than the SWP water contractors.

The cumulative unit conveyance costs indicated for reaches in Table B-25 do not necessarily equal the equivalent unit Transportation Charges to SWP water contractors served from such reaches. The unit charges in Table B-24 account for the rate of water demand buildup and cost allocation factors of the individual SWP water contractors; however, the unit costs included in Table B-25 reflect the effect of melding the respective buildups and allocation criteria of all SWP water contractors whose allocations are conveyed through a given reach. Table B-25 also includes surplus water delivered prior to May 1, 1973, and Article 21 water deliveries in 1994 and thereafter.

East Branch Enlargement Charges

Table B-26 reflects DWR's projection of annual capital costs of the East Branch Enlargement for each aqueduct reach. These projections will be redetermined in future bulletins to include the following:

- a reallocation of costs of constructing the present East Branch facilities between Alamo Powerplant and Silverwood Lake;
- a reallocation of costs of Silverwood Lake to reflect additional use as a result of East Branch Enlargement operation;
- a reallocation of costs of San Bernardino Tunnel to reflect redistribution of flow capacities necessary for the East Branch Enlargement facilities; and
- actual enlargement construction costs.

These costs will be recovered with interest from the seven Southern California SWP water contractors participating in the enlargement, in accordance with their amended water supply contracts (see *Table 10*).

Table 10 Determination of Factors for Distributing Capital and Minimum OMP&R Costs of East Branch Enlargement Facilities Among Participating Contractors

Reach Number	Description
18A	Junction, West Branch, California Aqueduct through Alamo Powerplant
19	Alamo Powerplant to Fairmont
20A	Fairmont through 70th Street West

Table B-27 lists the minimum OMP&R costs for each reach of the East Branch Enlargement. The costs are to be repaid by the seven SWP water contractors participating in the East Branch Enlargement. Currently, this table includes only minimum OMP&R costs attributable to the East Branch Enlargement. In accordance with Article 49(e)(1), the SWP water contractors participating in the East Branch Enlargement will also share in the remaining minimum OMP&R costs of the affected reaches, in accordance with a formula developed by DWR in consultation with the affected SWP water contractors.

Table B-28 shows each participating SWP water contractor's share of the estimated capital costs of the East Branch Enlargement shown in Table B-26.

Table B-29 shows the amounts of the annual capital cost components of the East Branch Enlargement Transportation Charge for each participating SWP water contractor. This component consists of each SWP water contractor's allocated share of debt service on bonds sold to finance the enlargement.

Table B-30 shows the minimum OMP&R components of the East Branch Enlargement Transportation Charge for each participating SWP water contractor for each year of the project repayment period. The amounts shown in Table B-30 will recover the minimum OMP&R costs shown in Table B-27.

Table B-31 shows the annual East Branch Enlargement Transportation Charge for each participating SWP water contractor (the sum of the corresponding amounts included in Tables B-29 and B-30).

East Branch Extension Charges

The East Branch Extension charges recover associated costs for East Branch Extension facilities beginning at Devil Canyon Powerplant Afterbay and extending to the terminus at Noble Creek in the vicinity of Beaumont, Riverside County. These costs are separated into 3 phases: Phase 1 Original, Phase 1 Improvements, and Phase 2. The East Branch Extension costs will be recovered from two SWP water contractors—San Bernardino Valley Municipal Water District and San Gorgonio Pass Water Agency—in accordance with their amended water supply contracts. *Table 11* shows the capital factors and the corresponding debt service, including the 25 percent bond cover, for each of the phases in 2026. The factors for distributing minimum costs are shown in *Table 12*.

Table 11 East Branch Extension Facilities Debt Service for 2026

SWP Contractor	Share of Participation (percent)	Total Debt Service Charge (in dollars)
Phase 1 Original		
San Bernardino*	45.8417	**6,120,466**
San Gorgonio	54.1583	**8,244,761**
Subtotal	*100.0000*	***15,223,449***
Phase 1 Improvements		
San Bernardino	63.3410	**565,391**
San Gorgonio	36.6590	**327,224**
Subtotal	*100.0000*	***892,615***
Phase 2		
San Bernardino	64.4210	**10,309,507**
San Gorgonio	35.5790	**5,693,826**
Subtotal	*100.0000*	***16,003,333***
Total		**32,119,397**

* Reduced by 2026 advanced payment of Greenspot Pump Station debt service.

In 2024, San Bernardino Valley Municipal Water District (SBVMWD) made a payment of $8.7 million to pay off remaining debt service obligations associated with the Greenspot Pump Station and facilitate the transfer of ownership as outlined in the original Joint Power Authorities agreement between DWR and SBVWMD.

* Reach designation in Phase II (calendar year 2013 and forward) have been modified to reflect new repayment reaches.

South Bay Aqueduct Enlargement Charges

The South Bay Aqueduct, including the enlargement capacity, began operations in 2015. The enlargement construction costs are being recovered in full from Alameda County Flood Control and Water Conservation District, Zone 7 (Alameda-Zone 7). Capital charges related to a portion of the enlargement construction costs benefitting off-peak pumping operations are initially paid by Alameda-Zone 7 to meet the bond resolution and later recovered from SWP water contractors through the transportation variable charge. The off-peak pumping operations originally paid by Alameda-Zone 7 are then returned to Alameda-Zone 7 as a credit

Table 13 South Bay Aqueduct Enlargement Debt Service for 2026

Project	Total Debt Service Charge (in dollars)
Enlargement	
Alameda-Zone 7	**16,767,741**
Off-Peak Pumping	**1,682,788**
Total	**18,450,529**

in the subsequent year. *Table 13* shows the corresponding debt service for the enlargement project, including the 25 percent bond cover, and the off-peak pumping debt service included in the 2026 Statements of Charges as described above.

After the completion of the South Bay Aqueduct Enlargement facilities, the capital and minimum PUFFs were redetermined. The redetermined factors include the additional constructed enlargement capacity for repayment reaches 1, 2, and 4. The factors shown in *Table 14* are applicable for years 2015 and forward.

The 2018 Statements of Charges (Bulletin 132-17) began to recover and redistribute the costs of these enlarged facilities using the redetermined PUFFs.

Short-term Agreements

DWR and the SWP water contractors execute short-term agreements that affect the SWP water contractors' charges.

Municipal Water Quality Investigations

DWR executed a 5-year agreement in 1997 with 16 municipal and industrial SWP water contractors, who agreed to pay for allocated shares of DWR's Municipal Water Quality Investigations program costs. Additional amendments were executed in 2002, 2006, 2008, 2010, 2014, 2017, 2019, 2022, and 2025 to extend the program. The Municipal Water Quality Investigations charges under this agreement are included in the transportation minimum OMP&R components shown in Table B-16A.

Feasibility Study

Nine SWP water contractors executed a short-term agreement (1997 and 1998) to

Table 14 Capital Proportionate Use of Facilities Factors for South Bay Aqueduct

For Calendar Year 2015 and Forward

Reach Number	Reach Description	Alameda County FC&WCD, Zone 7	Alameda County Water District	Santa Clara Valley Water District	Total

9	Alameda-Bayside Turnout through Santa Clara Terminal Facilities			1.000000	1.000000

participate in the feasibility study for the American Basin conjunctive-use program. Feasibility study costs are included in Table B-16A.

Delta Programs

SWP water contractors have agreed to participate in several Delta-related programs that started in 2007 and extend into the future.

Delta Conveyance

The first agreement pertains to the Bay Delta Conservation Plan (BDCP), which was agreed to in a Memorandum of Agreement (MOA) for Supplemental Funding for Certain Ecosystem Actions and Support for Implementation of Near-Term Water Supply, Water Quality, Ecosystem, and Levee Actions. The BDCP comprises two elements: fishery costs and consultation costs. These costs were added to the SWP water contractors' transportation minimum component for bill years 2007 through 2012.

The second agreement pertains to the non-BDCP costs of the MOA, comprising the Delta Vision and pelagic organism decline research costs. These costs were added to the SWP water contractors' conservation minimum component for bill years 2007 and 2008.

The third set of agreements pertains to the Delta Habitat Conservation and Conveyance Program (DHCCP). The agreements are between DWR and 20 participating SWP water contractors to provide 50 percent of the funding for the preliminary planning phase of an improved Delta water conveyance facility. (The remaining 50 percent is provided by the Bureau of Reclamation.) This program will assess potential habitat restoration and water conveyance options in the Delta. For bill years 2008 through 2011, nearly $70 million in charges associated with the DHCCP were billed directly to the 20 participating SWP water contractors as a separate line item in the Statements of Charges and are not reflected in the tables in this appendix.

A fourth set of agreements pertains to both DHCCP and BDCP. For bill years 2012 and 2013, an Agreement for Supplemental Funding for the Costs of Environmental Analysis, Planning and Design of Delta Conservation Measures, Including Delta Conveyance Options, was executed in 2012 between DWR and 16 participating SWP water contractors to provide 50 percent of the project funding. In 2012, $22 million was billed and in 2013, $28 million was billed directly to the 16 participating SWP water contractors as a separate line item in the Statements of Charges.

In 2018, a fifth set of funding agreements for the preconstruction planning costs of the California WaterFix facilities was executed between DWR and ten participating SWP water contractors to provide gap funding. Bill years 2018 and 2019 included a total of $58.4 million, which was billed directly as separate line items in the Statements of Charges and are not reflected in the appendix tables.

In 2020, 2021, 2022, and 2025, funding agreements were signed for a potential Delta conveyance project; planning and design was included for bill years 2021 through 2027. A total of $44.1 million was billed directly as separate line items in the 2026 Statements of Charges and is not reflected in the appendix tables.

Water Purchases

During 2013, SWP water contractors agreed to participate in the San Joaquin River Flow Augmentation Program. The costs of the $4 million program were recovered in the 2014 Statements of Charges.

During 2015 and 2016, SWP water contractors requested DWR enter into

agreements for San Joaquin River flow release purchases with Oakdale Irrigation District and South San Joaquin Irrigation District. The 2015 purchases of $5.75 million and the 2016 purchases of $13.75 million ($2 million invoiced in 2017) were included in the 2017 and 2018 Statements of Charges. Additionally, SWP water contractors agreed to purchase up to $12.5 million of 2018 Oakdale Irrigation District flow releases. This purchase was reflected in each SWP water contractor's 2019 charges.

Lake Perris Seepage Recovery Project

In the 2017 Statements of Charges, Metropolitan agreed to fund $7.25 million ($7.4 million with interest) for 2016 and 2017 planning and design costs for a proposed Lake Perris Seepage Recovery Project. Prior to the 2022 Statements of Charges, Desert Water Agency and Coachella Valley Water District executed agreements to participate in the project planning and design. DWR approved the use of Article 24(c)(2) of the water supply contracts to allow contractors to repay capital costs at an accelerated rate. DWR refunded Metropolitan the originally advanced $7.4 million collected as a line item under the Transportation Minimum Component. DWR included agreed upon amounts of $549 thousand for Desert Water Agency and $7.96 million for Metropolitan for the Lake Perris Seepage Recovery Project advanced funding charges under Transportation Capital Attachment 4D in the 2022 Statements of Charges. Coachella Valley Water District agreed to recover this project as an amortized charge under the Transportation Capital Component.

Tables B-1 through B-31

Note: Where applicable, the projected data values shown in this appendix are shaded and the bill year data are in **bold** type.

[1] Proportionate use factors apply to 2026 and reflect permanent capacity water transfers that have been signed as of June 1, 2025.

* South Bay Aqueduct factors reflect enlargement capacities for Alameda County Flood Control and Water Conservation District, Zone 7. These factors are applicable for years 2015 and forward.

[1] Starting with 2005, transmission costs that vary and depend on power usage are included, therefore recovered through the variable component.

[2] Power costs for the period 1968 through 1987 are for an interim facility.

* The costs of Del Valle Pumping Plant are combined with those of South Bay Pumping Plant to simplify the cost allocations.

[1] Table A amounts for the South Bay Area were supplied by non-project water for the period June 1962 through November 1967. Actual delivery quantities of project water are shown for 1967.

[2] Napa's Table A quantities exclude amounts during the period 1968 through 1987 that were supplied by non-project water.

[4] Year 1988 advance allocation.

[5] In accordance with the exchange agreement between the noted agencies, Metropolitan assumed responsibility for payment of variable OMP&R costs on the exchange water in reaches beyond Reach 22B, and Desert and Coachella for such costs from the Delta through Reach 22B. The adjustment in deliveries in Reach 22B provides for compliance with provisions for the repayment of costs under the agreement. In 1993 and after, the exchange takes place in Reach 26A.

[5] In accordance with the exchange agreement between the noted agencies, Metropolitan assumed responsibility for payment of variable OMP&R costs on the exchange water in reaches beyond Reach 22B, and Desert and Coachella for such costs from the Delta through Reach 22B. The adjustment in deliveries in Reach 22B provides for compliance with provisions for the repayment of costs under the agreement. In 1993 and after, the exchange takes place in Reach 26A.

[6] Includes 1,650 acre-feet recaptured from groundwater storage in 1982, 10,000 acre-feet in 1987, and 8,749 acre-feet in 1988. This water was stored under DWR's Ground Water Demonstration Program.

[1] Overpayment or underpayment for each calendar year—column [1] minus column [2].

[2] Interest rates shown are annual rates. Interest is credited daily at applicable rates on funds deposited in the State's Surplus Money Investment Fund.

[3] Amounts shown are end-of-year balances. Interest on overpayments is credited at applicable Surplus Money Investment Fund interest rates shown in columns [4] and [5]. Interest on underpayments is charged at the 1980 Project Interest Rate of 4.584 percent.

[4] Actual payments are shown for 1965 through 1976 with 1981 adjusted to reflect overpayments and underpayments without interest for prior years.
[5] Interest for overpayments and underpayments under provisions of Amendment 2 of the contract.
[6] Actual payments are shown for 1965 through 1973 with 1974 adjusted to reflect overpayments and underpayments without interest for prior years.
[7] Interest for overpayments and underpayments under provisions of Amendment 5 of the contract.
[8] Amounts in excess of incremental costs, under the provisions of the contract, reduce the Transportation Charge capital cost component of the agency's Statement of Charges for January 1981.

[1] Excludes extra peaking costs assigned directly to contractors. Refer to Appendix B text discussion of Table B-17 under "Project Water Charges."

[3] These values represent a proportionate allocation of the total variable OMP&R costs of pumping and recovery plants (Table B-3) associated with net annual withdrawals from storage for Project Transportation Facilities. The allocation is determined annually by applying the following ratio, calculated from the data shown in Table B-6: "Reservoir Storage Changes" (withdrawals, as a positive value) conveyed through each plant, divided by "Total" annual quantity conveyed through each plant, in acre-feet. The costs so determined are accumulated for all upstream plants for each year, for each respective reservoir.

TABLE B-12 Variable OMP&R Costs to be Reimbursed through Variable OMP&R Component of Transportation Charge[1] (in dollars)

[1] Excludes extra peaking costs assigned directly to contractors. Refer to Appendix B text discussion of Table B-17 under "Project Water Charges."

[3] These values represent a proportionate allocation of the total variable OMP&R costs of pumping and recovery plants (Table B-3) associated with net annual withdrawals from storage for Project Transportation Facilities. The allocation is determined annually by applying the following ratio, calculated from the data shown in Table B-6: "Reservoir Storage Changes" (withdrawals, as a positive value) conveyed through each plant, divided by "Total" annual quantity conveyed through each plant, in acre-feet. The costs so determined are accumulated for all upstream plants for each year, for each respective reservoir.

[1] Excludes extra peaking costs assigned directly to contractors. Refer to Appendix B text discussion of Table B-17 under "Project Water Charges."

[3] These values represent a proportionate allocation of the total variable OMP&R costs of pumping and recovery plants (Table B-3) associated with net annual withdrawals from storage for Project Transportation Facilities. The allocation is determined annually by applying the following ratio, calculated from the data shown in Table B-6: "Reservoir Storage Changes" (withdrawals, as a positive value) conveyed through each plant, divided by "Total" annual quantity conveyed through each plant, in acre-feet. The costs so determined are accumulated for all upstream plants for each year, for each respective reservoir.

Tables B-13 through B-31

Note: Where applicable, the projected data values shown in this appendix are shaded and the bill year data are in **bold** type.

[1] Reimbursed through the capital cost component of the Delta Water Charge.

[2] Negotiated settlements as to the magnitude of SWP planning costs from 1952 through 1978.

[3] Reimbursed through the minimum OMP&R component of the Delta Water Charge. Credits for Gianelli Pumping-Generating Plant power generation are reflected in these net costs.

[4] Beginning in 2024, Relinquished Capacity costs are collected under PAY GO and can be found in the B-20B PG table.

[5] Revenues credited through the capital cost component of the Delta Water Charge.

[6] Revenues credited through the minimum OMP&R component of the Delta Water Charge.

[7] Under amendments of Articles 22(e) and 22(g), planning and pre-operating costs of additional Project Conservation Facilities incurred through the previous year reflected in the Delta Water Charge.

TABLE B-13 PG-CAP Capital Debt Service of Project Conservation Facilities to be Reimbursed through Delta Water Charge by Reach—PAYGO (in dollars)

[1] Allocated capital costs as a result of permanent water transfers under the Monterey Amendment are reflected in this table.

[2] Costs from Table B-10 allocated to Solano County Water Agency are reduced herein by $2,102,700 in 1986 and $1,823,500 in 1987 under provisions of Amendment 10 to its water supply contract.

TABLE B-14 Capital Costs of Transportation Facilities Allocated to Each Contractor (in dollars)[1]

[1] Allocated capital costs as a result of permanent water transfers under the Monterey Amendment are reflected in this table.

[3] Costs from Table B-10 allocated to Empire West Side Irrigation District are reduced herein by $31,588 in 1978; $12,129 in 1980; $15,173 in 1981; $38,004 in 1983; $43,033 in 1986; $5,261 in 1995; $63,318 in 1996; and $124,667 in 1998 in accordance with letters of agreement with the district.

[4] Costs related to maximum annual Table A of 15,000 acre-feet under Amendment 18 of the water supply contract with Kern County Water Agency.

TABLE B-14 Capital Costs of Transportation Facilities Allocated to Each Contractor (in dollars)[1]

[1] Charges are debt service only and do not include bond cover.

[2] 2009 through 2025, charges include Reid Gardner separation costs that are allocated to SWP Contractors based on theoretical energy use over the facility service life, 1983–2013.

[3] Costs allocated to SWP Contractors in 1989 through 2002 are reduced by credits for Off-Aqueduct Power Facility costs allocated to the pumping of non-SWP water.

[1] Charges are debt service only and do not include bond cover.

[2] 2009 through 2025, charges include Reid Gardner separation costs that are allocated to SWP Contractors based on theoretical energy use over the facility service life, 1983–2013.

[3] Costs allocated to SWP Contractors in 1989 through 2002 are reduced by credits for Off-Aqueduct Power Facility costs allocated to the pumping of non-SWP water.

[1] For the period 1968 through 1987, rates are for an interim facility.

[2] The relatively minor costs of Del Valle Pumping Plant have been combined with those of South Bay Pumping Plant to simplify the allocation procedure.

[3] Citrus Pump Station began operation during 2017. No planned water deliveries are scheduled for 2024–2035 at Reach EBX-R2C, so no costs or rates are shown for Greenspot Pump Station. All deliveries through Crafton and Cherry Valley Pump Stations (2024–2035) are assumed to flow through Citrus Pump Station.

[1] Capital charges repaid through bond debt service for 2025 and prior exclude bond cover; 2026 and after includes both bond debt service and bond cover.

TABLE B-20A FZ Calculation of Delta Water Rates—FREEZE

Calculation in Accordance with Article 53(i) of the Monterey Amendment
(Values in millions of dollars [$] or millions of acre-feet [af] discounted to 2025 at 4.594 percent per annum)

Procedure	Capital Cost Component		Minimum Operation, Maintenance, Power and Replacement Component[1]		Total Delta Water Rate	
	[1]		[2]		[3]	
Commencing in 2026						
Total Costs of "Initial" Project Conservation Facilities to be Reimbursed and Project Water Table A Amounts During the Project Repayment Period	$13,861.75[a]	696.05 af	$9,544.07[b]	696.05 af	$23,405.83	696.05 af
Less, Project Power Revenues to be Realized During the Project Repayment Period	($7,826.25)		($7,710.52)		($15,536.77)	
Less, Delta Water Charges Paid and Project Water Table A Amounts, Prior to 2026	($4,721.58)[c]	(663.18) af	($1,820.14)	(663.18) af	($6,541.72)	(663.18) af
TOTAL	$1,313.92	32.87 af	$13.42	32.87 af	$1,327.34	32.87 af
Rate Applicable in 2026	$39.98 per acre-foot		$0.41 per acre-foot		$40.39 per acre-foot	

[1] Considering that all operating costs of Project Conservation Facilities will not vary with annual amounts of Project water delivered, and therefore are properly classified as "Minimum" OMP&R Costs. OMP&R costs exclude amounts for Conservation Replacement Accounting System.

[a] Including net credits of $4,850,000 for settlements as to the magnitude of Project Capital costs incurred prior to December 31, 1960, and net credits of $6,678,320 for settlement as to the magnitude of Project Capital costs incurred during the 1961 through 1978 period.

[b] Includes conservation power costs and credits at San Luis Reservoir.

[c] Applying all Delta Water Charges paid prior to 1970 to reimburse Capital costs (the charge was not divided into components until 1970).

TABLE B-20B FZ Delta Water Rates by Facility—FREEZE (in dollars per acre-foot)

Item	Capital Cost Component	Minimum Operation, Maintenance, Power and Replacement Component	Total Delta Water Rate
	[1]	[2]	[3]
Initial Conservation Facilities			
Oroville Division			
Water Supply and Power Costs[1]	258.28	136.59	394.87
Less, Oroville Power Revenues	(138.12)	(55.38)	(193.50)
Subtotal	*120.16*	*81.21*	*201.37*
Delta Facilities[2]	74.93	90.95	165.88
California Aqueduct portion			
Reach 1	14.87	22.89	37.76
Reach 2A	8.12	2.70	10.82
Reach 2B	4.40	1.95	6.35
Reach 3	2.86	0.99	3.85
Subtotal	30.25	*28.53*	*58.79*
San Luis Facilities	45.93	33.13	79.06
Planning and Preoperating Costs through 2024	11.49	0.00	11.49
45,000 acre-feet Relinquished Costs	0.89	1.19	2.07
Less, Capital Cost Credits	(5.54)	0.00	(5.54)
Less, Delta Water Charges paid prior to 2026	(238.13)	(234.60)	(472.73)
Rate Applicable in 2026	39.98	0.41	40.39

[1] Includes revenue received from non-SWP Contractors.
[2] Includes: 1. Delta Facility planning costs; 2. Delta Studies costs; and 3. Suisun Marsh Facilities costs.

[1] Hypothetical charges, which, if assessed on all Table A water delivered to date, all surplus water delivered prior to May 1, 1973, and all Table A water estimated to be delivered during the remainder of the project repayment period (Table B-5B), would provide a sum at the end of the period financially equivalent to all Transportation Charge and Delta Water Charge payments required under a water supply contract, considering interest at the Project Interest Rate, 4.594 percent per annum.

[1] Charges are projected for calendar year 2026 and do not represent actual equivalent unit charge of water delivered to each contractor.
[2] Water deliveries from Table B-5B used in the calculation of unit charges are projected to be 60 percent of maximum Table A for calendar year 2026.

TABLE B-25 FZ Equivalent Unit Transportation Costs of Water Delivered from or through Each Aqueduct Reach[1]—FREEZE (in dollars per acre-foot)

[1] Representative of transportation unit costs only; does not include a unit cost of conservation. The Delta Water Rate should be added to these values in order to approximate unit costs at canalside. Includes surplus water prior to May 1, 1973.

[2] Hypothetical charges which, if assessed on all Table A water delivered to date, all surplus water delivered prior to May 1, 1973, and all Table A water estimated to be delivered during the remainder of the project repayment period (Table B-5B), would provide a sum at the end of the period financially equivalent to all Transportation Charges required under the water supply contract considering interest rate at the Project Interest Rate of 4.594 percent per annum.

[3] The Water System Revenue Bond (WSRB) Surcharge equivalent unit rate is calculated by multiplying Column 1 by the ratio of the 2026 WSRB surcharge to the sum of the Transportation Capital and the Capital component of the Delta Water Charge.

TABLE B-25 PG Equivalent Unit Transportation Costs of Water Delivered from or through Each Aqueduct Reach[1]—PAYGO (in dollars per acre-foot)

[1] Representative of transportation unit costs only; does not include a unit cost of conservation. The Delta Water Rate should be added to these values in order to approximate unit costs at canalside.

[2] Values are projected for calendar year 2026 and do not represent actual unit costs of water delivered from each aqueduct reach.

TABLE B-26 Capital Costs of Each Aqueduct Reach to be Reimbursed through the Capital Cost Component of the East Branch Enlargement Transportation Charge Phase 1 and Phase 2 (in dollars)

[1] Bond cover is included in the bill year and all future years, and has been returned for all prior years.

[2] East Branch Enlargement Phase 2 debt service schedule started in 2017, and this table is the sum of East Branch Enlargement Phase 1 and Phase 2 capital charges for each contractor.

[3] Under Article 49(d)(4)(A) of its contract, San Bernardino Valley Municipal Water District elected to pay a portion of its allocated costs of East Branch Enlargement in advance rather than to participate in payment of Water System Revenue Bonds. This election was made via a letter of agreement signed June 1, 1987. As of June 1999, $6,347,938 has been received from the San Bernardino Valley Municipal Water District.
